

HOLLANDS

Hollands are the offspring from previous mating of fowls imported from Holland crossed with White Leghorns, Rhode Island Reds, New Hampshires and Lamonas that were selected for desired characteristics, resulting in the breed known as the White Hollands.

During the same period, selected matings of the progeny from White Leghorns, Barred Plymouth Rocks, Australorps and Brown Leghorns were bred to produce a fowl with the same characteristics with a barred feather pattern, thus the Barred Hollands were originated.

These breeds were admitted as a standard in 1949.

A heavy general purpose fowl for meat and eggs. The skin color is yellow and the egg shells are white.
